Zirven V2

Brand overview

Zirven is a technology and software company. We create, own and keep improving digital products, and we build custom software for partners.

For businesses ready to move forward, **Zirven builds intelligent digital products**: SaaS platforms, AI-powered business software, and web and mobile applications. They are engineered as products, owned for the long term and improved with every release.

What we build

- SaaS products: multi-tenant platforms we own and operate
- AI-powered business software: assistants, extraction, decision support
- Web and mobile applications
- Automation, APIs and integrations
- Data, analytics and cloud platforms
- Enterprise and custom software (Zirven Solutions)

Who it is for

- **Business leaders** who need software that runs operations, not slides about it
- **Teams** who use our products every day
- **Developers and partners** who integrate with our APIs
- **Talent** who want to build serious products
- **Investors** who back a product company with a platform

The name

Zirve is Turkish for *summit*. For Zirven the summit is not a finish line. It stands for **progress**, for **solving difficult problems**, for **reaching the next level** and for **products that keep evolving**. Every release starts from the height the last one reached.

Zirven is · Zirven is not

Zirven is	Zirven is not
A product company that builds and owns software	An outsourcing agency that only rents out developers
The parent brand of VEVO and future products	A single app, or a brand tied to one product
A B2B technology company with an international audience	A consumer marketplace or a brand for one local community
Engineering-led, measured and specific	”AI-powered everything”, hype or vague futurism

Primary line & descriptor

Tagline exploration

“Building intelligent digital products.”

Says exactly what Zirven does, in the active voice. “Building” signals continuous work. Works as a homepage headline, a signature line and a boilerplate opener.

Primary

“Software for the next level.”

The summit idea in four words. For campaigns, events and recruiting, never alone on first contact, because it does not say what we make.

Secondary

“Intelligent products. Built to last.”

Product ownership and quality. Good for enterprise sales material.

Campaign

“We build what businesses run on.”

Confident and concrete. Becomes true as the portfolio grows, so hold it until there are two or more products in market.

Later

“Engineered to climb.”

Clever but abstract. It needs explaining and could suit any company.

Rejected

“Revolutionizing the future · Innovating tomorrow · Next-generation solutions · AI-powered everything”

Generic hype. These lines could belong to anyone and promise nothing specific. Never use them.

Never

About V2.1

V2.1 defines Zirven as a technology and software company and the parent brand of a product portfolio. It keeps V2’s visual craft: the Summit Z, the purple palette, Readex Pro, the contour pattern and the token and SVG production system. It retires V2’s consumer positioning, its taglines, its warm accent colour and its consumer interface concepts. That earlier concept could return one day as a separate product under Zirven, but it is not the corporate identity.

Brand personality

Zirven sounds and looks like the senior engineer in the room: calm, precise, ambitious and easy to understand.

Trait	This means	Not this
Intelligent	We explain how things work and why they matter.	Jargon used to sound clever
Confident	Short, declarative sentences. We state what our software does.	Superlatives, exclamation marks, "best-in-class"
Technically credible	Real numbers, real interfaces, named protocols and standards.	Vague claims like "powered by AI"
Modern	Current product language and clean interfaces. Dark-first.	Trend chasing, crypto or sci-fi styling
International	Plain English that translates cleanly into Turkish and Arabic.	Idioms, puns, locale-specific jokes
Clear	One idea per sentence, active voice, concrete nouns.	Buzzword chains, passive voice
Product-focused	Show the product. Talk about outcomes users can see.	Abstract "solutions", stock imagery
Ambitious, without exaggeration	We aim high and say so plainly: "the next level".	"Revolutionizing", "changing the world"

Where we sit

Archetype: **the Builder**. Part creator, part sage. It makes things that work, explains them well and improves them every time.

Creative direction

The big idea: **the next level.** A summit is a point you reach and then build from. Every Zirven product release climbs from the last.

1 · One angle, used with precision

The 20° ramp of the Summit Z is the only geometric motif: in the overline marker, the ascent lines, the summit cut and the way product windows step up a layout.

2 · The product is the hero

Show real interfaces, real data and real workflows, built with the design system. They prove that we build software. Mock-ups beat metaphors.

3 · A dark stage with violet light

Zirven Night is the stage. Violet and Electric Purple are the light on it. Light surfaces (Snow) are used for documents, print and long reading.

4 · Restraint, with one signal

Intelligence Cyan appears only where intelligence or live data is at work: an AI answer, a live sync, an active node. It makes up less than 5% of any layout.

5 · Systems, not ornaments

The supporting graphics show how software works: contour data terrain, module grids, layered platforms and connected nodes.

6 · Calm density

Interfaces are information-rich but quiet. Use hairlines instead of heavy boxes, tabular numbers, generous gutters and an 8 px rhythm.

The summit, reinterpreted

Progress

Steady, measured climbs, never jumps.

Hard problems

We pick the difficult route on purpose.

The next level

Every version stands on the last one.

Connected systems

Products, modules and data that work together.

Always avoid

Robot heads

Brains

Circuit-board patterns

</> as a logo

Glowing AI orbs

Crypto / web3 styling

Stock handshakes

Neon overload

Mountain photography clichés

Brand architecture

An endorsed model. Zirven is the master brand. Products have their own names and glyphs and always carry the Zirven endorsement.

Endorsed product lockup, light

Endorsed product lockup, dark

Endorsement rules

- Product lockup: product tile + name | "a product by" + Zirven logo.
- Product websites end with "VEVO is a product by Zirven".
- App stores and contracts list **Zirven Technology** as publisher.
- The Zirven logo never contains a product glyph, and a product never uses the Summit Z.

Naming products

- Short (4–6 letters), easy to say in EN, TR and AR.
- No "Zirven" or "Z-" prefix, so the portfolio can grow freely.
- Features take descriptive names: [Product] + plain noun.
- Clear trademarks in classes 9, 35 and 42 before launch.

Product family system

- Every product icon uses the Zirven tile: a rounded square (22.5% radius) on Night or Deep Violet.
- Products are told apart by glyph and name, not by new colours.
- Every product uses the Zirven UI system, tokens and Readex Pro.
- Cyan stays reserved for AI and live data in every product.

The Summit Z

A capital Z drawn as a climb, a summit and a solid base. One shape that is a letter, a direction and a promise to keep moving up.

Reading the mark. The ramp climbs at 20°, the steady progress of a product getting better. It reaches an acute summit, the next level. The descent drops at 55° to a solid base, the platform everything is built on. The wordmark is set in lowercase Readex Pro SemiBold, outlined, so the capital Z of the symbol is never repeated.

Construction

Every logo file is generated from a few numbers in `scripts/build_brand.py`. Nobody redraws it by hand.

Artboard

64 units. Symbol bounding box 42×50 .

Module *m*

10 units, the height of the base bar.

Ramp

20° , vertical thickness 1m.

Summit

35° interior angle.

Descent

$55^\circ (= 20^\circ + 35^\circ)$, 11.5 units measured perpendicular.

Micro master

Used at 24 px and below. Ramp 8.4, descent 57° , base snapped to 2 px at 16 px.

Lockup

Symbol height = $1.62 \times$ x-height of the wordmark. Gap = $0.30 \times$ symbol height. The symbol sits on the baseline.

Wordmark

"zirven", Readex Pro weight 600, tracking $-6/1000$, outlined from the font with HarfBuzz.

Lockups & languages

One international master brand, fully usable in Turkish and Arabic. Use English by default. Use Turkish and Arabic lockups where the audience reads those languages.

Software · SaaS · AI

English descriptor: Software · SaaS · AI

Yazılım · SaaS · Yapay Zekâ

Turkish descriptor: Yazılım · SaaS · Yapay Zekâ

Arabic lockup (RTL: the symbol leads on the right)

Bilingual Arabic + Latin, for events and signage

Writing the name

- Running text: **Zirven** (capital Z).
- Legal: **Zirven Technology** / Zirven Teknoloji.
- Never **ZIRVEN** in Turkish capitals. If capitals are unavoidable, write **ZİRVEN** with the dotted İ.

Why lowercase

Turkish has two letters i: dotted (i/İ) and dotless (ı/I). In capitals, ZIRVEN reads as "Zırven" in Turkish. The lowercase wordmark reads correctly everywhere, in every market.

Arabic

زيرفن is set in Readex Pro Arabic, weight 560, and outlined. In RTL layouts the symbol sits on the right and the 20° ramp is not mirrored: the symbol is a letterform, not an arrow.

Clear space

Keep at least $2m$ clear on every side, where m is the height of the symbol's base bar (1/5 of the symbol height).

For the symbol alone, use the same $2m$. On app icons and favicons the tile itself provides the clear space.

Minimum sizes

Below these sizes the logo loses detail. At 24 px and smaller, always use the micro master.

Symbol · 16 px · 4 mm
(micro master)

Symbol (master) · from 32 px

Horizontal · 80 px wide · 20 mm

Stacked · 48 px tall · 14 mm

Descriptor · 150 px wide · 38 mm

Misuse

Use only the supplied files. The logo is a fixed artwork.

The logo consists of a stylized 'Z' symbol followed by the word 'zirven' in a lowercase, sans-serif font.

Do not stretch or condense.

The logo is tilted at an angle, which is incorrect usage.

Do not rotate. The 20° lives inside the mark.

The 'Z' symbol is colored orange, which is outside the brand's color palette.

Do not recolour outside the palette.

The logo is set against a dark background and has a glowing blue aura around it.

Do not add glows, shadows or bevels.

The word 'zirven' is written in all capital letters as 'ZIRVEN'.

Do not retype the wordmark or set it in capitals.

The logo is faded and placed over a complex, wavy line pattern background.

Do not lower the opacity or place it on busy backgrounds.

The 'Z' symbol is shown as a simple outline without fill.

Do not outline the symbol.

A stylized 'Z' symbol that is a variation of the main logo, used as a review candidate.

Do not use the review candidates (B, C) as logos.

The logo is preceded by a dark square containing a white 'V'.

Do not lock up a product tile with the Zirven logo except in the endorsement format.

Colour

A deep violet foundation with one cool signal. Every colour has a job. If a colour has no job, leave it out.

Zirven Night

#0E0B1F

RGB 14 11 31 · CMYK 55 65 0 88

Primary dark surface. The stage for the brand and the product UI.

Deep Violet

#241654

RGB 36 22 84 · CMYK 57 74 0 67

Depth layers, app-icon gradient start, raised dark panels.

Zirven Violet

#5B34E0

RGB 91 52 224 · CMYK 59 77 0 12

Primary brand colour: symbol on light, primary actions and links on light.

Electric Purple

#9671FF

RGB 150 113 255 · CMYK 41 56 0 0

Accent on dark: symbol on dark, focus, active states, chart series 1.

Lavender

#D3C8FF

RGB 211 200 255 · CMYK 17 22 0 0

Soft accent: secondary text on dark, tints, pattern lines.

Snow

#F7F6FC

RGB 247 246 252 · CMYK 2 2 0 1

Light surface for documents and print. Text on dark.

Intelligence Cyan

#3DD8E8

RGB 61 216 232 · CMYK 74 7 0 9

Restricted: AI activity and live data only, under 5% of any surface. On light, use Cyan Ink #0A7A88.

Retired

Summit Coral (V2)

Not part of V2.1

The corporate identity has no warm accent. Errors in product UI use the functional red.

Proportion

Accessible pairings (WCAG 2.2)

Text	Background	Ratio	Use
Snow	Night	18.0 : 1	AAA Body text on dark
Lavender	Night	12.4 : 1	AAA Secondary text on dark
Electric Purple	Night	5.6 : 1	AA Links and accents on dark
Intelligence Cyan	Night	11.2 : 1	AAA AI labels on dark
White	Zirven Violet	7.0 : 1	AAA Primary buttons on light
Zirven Violet	White	7.0 : 1	AAA Links on light
Cyan Ink	White	5.1 : 1	AA AI labels on light
White	Electric Purple	3.4 : 1	Fail Use Night text on Electric Purple instead
Zirven Violet	Night	2.8 : 1	Fail Use Electric Purple on dark

CMYK values are straight screen conversions. Print colours must be matched on a press proof: start from the Pantone 2725 C–2735 C range for Zirven Violet and print Night as a rich violet-black.

Typography

Readex Pro is kept from V2: one variable family (weights 160–700) designed for both Latin and Arabic. JetBrains Mono is added for code and data on developer surfaces.

Primary · Readex Pro (OFL)

Aa Iı İi

Building intelligent digital products.

h1	Software for hard problems	44 / 1.1 · 600 · -1.8%
h2	Built to connect	34 / 1.15 · 600 · -1.2%
h3	Grounded in your data	24 / 1.25 · 600
body-lg	We design and build SaaS platforms, AI-powered software and digital products.	18 / 1.6 · 400
body	Every Zirven product is API-first and shares one engineering platform.	16 / 1.6 · 400
overline	— SOFTWARE · SAAS · AI	12 · 600 · +14% · caps
code	npm install @zirven/vevo	13.5 / 1.6 · JetBrains Mono

Rules

- Headings 600, body 400, light 300 only for display contrast.
- Use sentence case in every language.
- Use tabular numbers in UI and data.

Arabic

- Same family. Set Arabic 1–2 px larger, line-height 1.7–1.8.
- Mirror the layout, not the symbol.
- Never letter-space Arabic.

Fallbacks

- Email and Office: Segoe UI / system-ui.
- Arabic: Noto Sans Arabic.
- Code: ui-monospace, Menlo, Consolas.

Iconography

One technology icon family for the company, the website and every product. These replace V2’s consumer icon set entirely.

Grid

24 × 24 px with a 2 px safe area (dashed line).

Stroke

1.75 px, round caps and joins, corner radius 1.6–2.5 px.

Fill

Outline only. One small solid accent is allowed (Products tile, the AI spark centre).

AI

A sharp four-point spark built on straight edges, never a brain, robot or glowing orb.

Sizes

16 / 20 / 24 / 32 px. Icons scale as vectors and the stroke stays 1.75 at 24 px.

Files

icons/svg/*.svg, sprite icons/zirven-icons.svg, injector assets/js/zirven-icons.js. A further 36 UI utility icons follow the same rules.

Pattern & graphic devices

V2's summit contour pattern stays, re-read as **data terrain**: elevation lines that are also a field of data. Three supporting devices complete the system.

Data terrain: contours, one Electric "summit line", three cyan nodes connected (systems at work)

Data terrain, light: documents, print, slides

Module grid: modules gather along the 20° ramp, and a few are live products

Ascent lines

Parallel lines at 20°. Use them for glass manifestation, section backgrounds and signage bands.

Summit marker

A short rule climbing at 20° before every overline. It is the smallest brand signature.

— WHAT WE BUILD

Summit cut

A 20° chamfer on one top-right corner of a hero card or a slide. Use it at most once per layout.

Patterns stay quiet: line opacity 10–35%, never behind body text, and never more than one pattern per layout.

Favicon & app icon

A rounded tile (22.5% radius) holds the Summit Z. The tile is the shared shape of the whole product family.

File	Size	Use
favicon/favicon.svg · favicon.ico	vector · 16/32/48	Browser tabs (micro master, flat Violet tile)
favicon/apple-touch-icon.png	180	iOS home screen (full-bleed, iOS applies the mask)
favicon/icon-192.png · icon-512.png · maskable-512.png	192 · 512	PWA manifest (site.webmanifest)
favicon/app-icon.svg · app-icon-1024.png	1024	App stores, social avatars, GitHub organisation

Imagery

Our imagery proves that we build software. The order of preference: the product itself, abstract system graphics, then photography of real people doing real work.

Photography direction

- Real teams in real workplaces: engineering reviews, whiteboards, operations floors, warehouses, clinics, offices.
- Natural light, honest moments, people focused on work, never looking at the camera.
- Architecture and engineering detail: precise lines, concrete, glass, steel.
- Grade: cool shadows lifted toward Deep Violet, true skin tones, low saturation.
- Diverse, international casting.

Never

- Robots, humanoid AI, brains, glowing orbs, "digital faces".
- Circuit boards, binary rain, holograms, crypto coins.
- Stock handshakes, pointing at screens, staged high fives.
- Food, retail or leisure scenes as brand imagery.
- Mountain-climbing photography used to illustrate "summit". The metaphor lives in the geometry.

Show AI through what it produces: an answer with sources, an automated step, a decision made faster. Never draw AI as a creature or a sphere.

UI design language

One interface system for every Zirven product. It is calm, dense where data needs it, dark-first, and readable in English, Turkish and Arabic.

Data first

Numbers and states lead. Chrome recedes into hairlines and surface steps.

One signal

Cyan marks AI and live data, nothing else. Users learn it once.

People in control

AI suggests, people approve. Actions that change data are always reviewable.

8 px rhythm

A 4 px sub-grid, a 248 px sidebar, 12-column web layouts with 24 px gutters.

Components (live, from assets/css/zirven.css)

AI patterns

- Cyan spark label on every AI-generated block.
- Sources are always cited (queries, files, records).
- "Requires approval" on actions that change data.
- Show progress steps, not spinners.

Data visualisation

- Series order: Electric, Lavender, ink-500, Deep Violet.
- Cyan only for AI forecasts or live series.
- Gridlines at 8% Lavender. Tabular numbers.
- Sequential scale: Deep Violet → Electric → Lavender.

Themes & motion

- Dark is the default for products. Light is available for documents and reports.
- Ease cubic-bezier(.2, .8, .2, 1): 120 / 200 / 360 ms.
- Reveals climb 10 px along the ramp. Respect reduced motion.

Social media

On social, Zirven shows products, explains the engineering behind them and hires. Every post either shows something real or teaches something useful.

15 · LinkedIn company post

[Open →](#)

16 · Announcement set (EN · TR · AR)

[Open →](#)

Content pillars

- **Product:** launches, releases, how features work.
- **Engineering:** architecture notes, AI evaluations, open source.
- **People:** hiring, team, how we work.

Templates

- Margins 72 px at 1080. The logo sits top-left or bottom-left.
- Every post has an overline with the summit marker.
- One message per asset, ≤ 12 words in the headline.

Profile

- Avatar: app icon tile. Cover: data terrain + primary line.
- Bio: "Building intelligent digital products. Software · SaaS · AI".
- Hashtags: #SaaS #AppliedAI #ProductEngineering, no more than three.

Print applications

Quiet, precise stationery on uncoated stock. Night and violet on paper, with the symbol foiled or spot-printed.

```

Voice & messaging

Write the way a senior engineer explains a product to a smart customer: specific, calm and sure.

Write

- "VEVO answers questions about your operations, with sources."
- "Actions that change data wait for approval."
- "We build in short, measured steps."
- "API-first. SSO, roles and audit logs included."

Don't write

- "Revolutionizing business with next-generation AI."
- "Unleash the power of seamless synergy."
- "The future of everything, today."
- "World-class, cutting-edge, game-changing solutions."

Boilerplate

EN · 50 words

Zirven is a technology and software company that builds intelligent digital products. It creates and owns SaaS platforms, AI-powered business software, and web and mobile applications, including VEVO, the AI-powered business platform. Through Zirven Solutions it also builds custom software for partners. Software · SaaS · AI.

TR

Zirven, akıllı dijital ürünler geliştiren bir teknoloji ve yazılım şirketidir. SaaS platformları, yapay zekâ destekli iş yazılımları, web ve mobil uygulamalar üretir ve bunların sahibidir; yapay zekâ destekli iş platformu VEVO bunlardan biridir. Zirven Solutions ile iş ortakları için özel yazılım da geliştirir.

AR

زيرفن شركة تقنية وبرمجيات تبني منتجات رقمية ذكية. تطوّر الشركة وتمتلك منصات برمجيات كخدمة، وبرمجيات أعمال مدعومة بالذكاء الاصطناعي، وتطبيقات ويب وجوال، ومنها VEVO منصة الأعمال المدعومة بالذكاء الاصطناعي. ومن خلال Zirven Solutions تبني برمجيات مخصصة لشركائها.

Vocabulary

Prefer	Instead of
build, ship, run, improve	revolutionize, disrupt, transform
products, platforms, software	solutions (alone, without saying what)
AI assistant, extraction, forecasting (specific)	"AI-powered" on everything
customers, teams, partners	users (in marketing), consumers
the next level, the next version	the future, tomorrow, next-generation

Logo review (V2.1)

We tested the Summit Z again for a software company, against a modular and a layered alternative, at 16 to 64 px, as an app icon, in a website header and in monochrome.

A · Selected · 28 / 30

B · Modular · 20 / 30

C · Layered · 22 / 30

A is the strongest at 16 px, in monochrome and in the portfolio, and it is the easiest to remember. B's modules became the logo's motion. C's layers became the platform layer in architecture diagrams. Full comparison: [logo/exploration/logo-review.html](https://www.summitz.com/logo/exploration/logo-review.html).

Files & production

Everything is generated, rendered and checked by scripts. Change the source, then rebuild.
